This E-Book has been made possible by www.routerforums.com

Introduction:

Well here is a sample of the look and feel of this collection of Router Tips. You can include hyperlinks in your text files to maybe resources that you have found on the web. Please no tips that are of the commercial nature like a recommendation about what makes your favorite store work then a link to this online tool store. If the store supports the making of tips and has video posted that show a neat tip then that works fine.

Please Note: Please be sure not to add copyrighted material that is not your Own Material.

Our Objective is to get as many router tips and sources as possible.

Thanks Bob and Rick
the Router Workshop....

Router Tip One: Here is the descriptive Title.

Dan and I have continually thought and talked about the many uses of the Router and have over the years been giving what we thought as our best advice. We have talked about things from Table Mounting your Router to showing our best Jigs and Fixtures using the guides and patterns.

Today's post is about you and your best bit of Router Information. Dad and I are looking to compile and produce a FREE E-Book that is a collection of the best bits of router information. Maybe you have some advice, shortcuts, mistakes and/or ideas on how use the router. Let me give you some examples of what we are looking for:

Giving Advice:

What would be the one bit of advice you would give others? If you could share one recommendation what would it be? What's the greatest lesson you have ever learned?

Shortcuts:

Have you discover any ways to make a router operation easier? or Is there any ways to get results easier? Any special jigs or fixtures you use? Are there any ways to make things easier or complete an operation faster?

Mistakes:

Have you made mistakes that have set you back? Any safety problems or pitfalls that we need to watch out for? What should we NOT do?

Ideas:

When working on a project if there is one thing we should do first, what would it be? If there is one thing that is the most important Router Tip, what would it be? If you have to begin again on let's say setting up your shop, what would it be?

This is your opportunity to participate in the "Best Collection of Router Information on the Web" To submit your best bit of information please complete the online form below. Include your full name, email address and the text of your information that is at least one paragraph to a maximum of one page. All of the information selected for the E-Book will include your name as the author plus any of your web links.
